

THROWERS R US — PERFORMANCE TRACKING SYSTEM

Proposal & Functional Architecture Blueprint for Mobile & Web Application

Recipient: Phelecia Reynolds-Udoku & Family

Author: H. Michael Vassell | July 2026

Dear Phelecia,

I hope this message finds you and your family in great health and spirits. Watching your journey over the years fills me with immense pride—not just as your former coach, but as someone who has seen firsthand the dedication, resilience, and brilliance you bring to everything you touch.

As coaches, our mission never truly ends on the track. For years, a persistent problem has plagued track and field coaching: **how to effectively track, measure, and visualize athlete development in real-time across every metric**. While we write periodized annual plans and design strength engines, we often lack a single, unified digital tool that brings everything together—connecting daily workouts, strength maxes, rate of perceived exertion (RPE), sleep, recovery, and competition performance into clear visual dashboards and trend graphs.

To solve this, I have engineered a comprehensive blueprint—the **Throwers R Us Annual Plan & Athlete Monitoring System**. It handles everything from dynamic percentage-based workout generation and 1RM max tracking to squad progress analytics and 52-week periodized planning.

However, moving from a complex spreadsheet architecture to a seamless, user-friendly mobile and web application requires top-tier software design and development talent. Knowing the incredible expertise and technical capabilities your children possess, I am reaching out to ask if they would be open to lending their skills to collaborate on building this game-changing application.

Key Vision for the Mobile & Web App:

- **Athlete Mobile Interface:** Daily logging for sleep, recovery, RPE, training load, and competition marks.
- **Dynamic Workout Generator:** Automated gym & field workouts based on individual 1RM percentage profiles.
- **Visual Analytics Dashboard:** Interactive visual graphs tracking distance progression, lift improvements, and workload trends.
- **Centralized Squad Calendar:** Full visibility into team periodization phases, peak dates, and competition schedules.

This app has the potential to transform how track and field programs—both locally in Jamaica and globally—monitor and elevate their athletes. Having your family's creative and technical mark on this project would make it all the more meaningful.

I would love to set up a brief chat with you and them at your convenience to share the prototype blueprint and walk through the vision together. Let me know what date and time might work best.

H. Michael Vassell

Technical Specification & Sheet Architecture

The table below demonstrates how the data structure from our master engine (Throwers_R_Us_Annual_Plan_Tracking_System_v2.xlsx) directly translates into user-facing features, user roles, and database tables for the proposed application.

Workbook Source Sheet	Proposed App Functionality & UI Features	Target User
Athletes Lists	User & Athlete Roster Management: Centralized profile management storing baseline throw/lift metrics, discipline categories, contact details, and active/injured status.	Coach / Admin
Weekly Results	Mobile Daily Logger: Mobile-friendly form allowing athletes to log sleep hours, RPE (1–10 scale), daily throw marks, lift outputs, and competition performances in real-time.	Athlete
Max Master Set % Engine	Dynamic Prescription Engine: System logic that auto-calculates target weight loads, rep schemes, and tonnage per workout based on updated 1RM maxes and mesocycle phases.	System Engine
Workout Generator LIFTS	Interactive Daily Card: Personalized workout card generated daily for each athlete, linking to exercise movement databases, warm-up routines, and set/rep instructions.	Athlete / Coach
Squad Overview Monthly Summary	Performance & Readiness Dashboard: High-level visual dashboard featuring interactive charts for performance gain percentages, strength progression, and workload trends over time.	Coach
Annual Plan Meet Schedule	Periodization & Calendar Hub: Interactive 52-week macrocycle timeline showing training phases (GPP, SPP, Peak), entry deadlines, venue links, and key meet dates.	Coach
